

WINDOWS INSTALLATION IN VIEW & STOCKVIEW DEMO

Installation of the InView & StockView Demo is quite easy if you follow these steps. It should require no more than a few minutes.

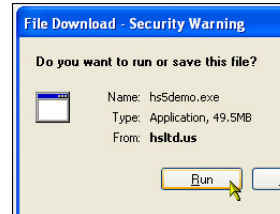

DOWNLOAD THE SOFTWARE

To download the InView & StockView demo for Windows, go to <http://hsltd.us/downloads/downloads/demos.html>

Locate the Windows Demo link and click on it.

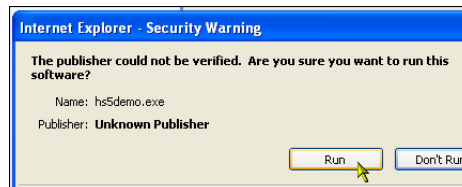

Before the download begins, a window should appear asking if you want to Run or Save the download. In most cases Run is the choice you want to make.

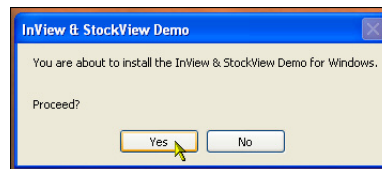

Note:
For working with images, it is necessary to have the free Apple QuickTime software installed. See <http://www.apple.com/quicktime/download/>

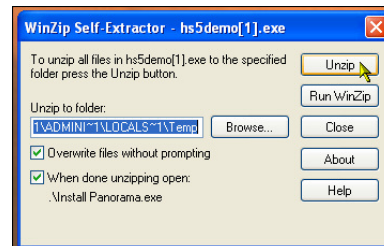

When the download has completed, a warning appears regarding the “unknown publisher”. Click on Run in order to continue.

The installer starts by confirming the package that you are about to install.

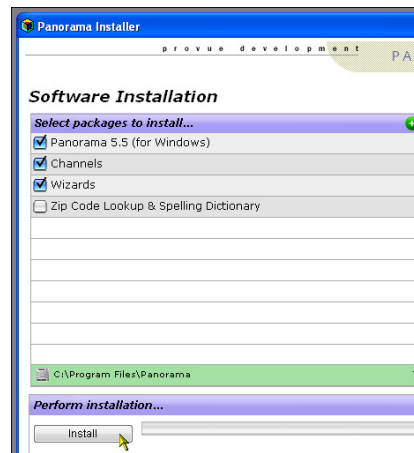

The software then Unzips to your hard drive. It's advised to allow it to use the default settings which sends the installation to your Temp folder.

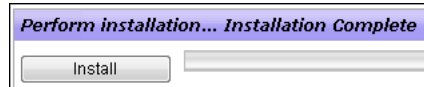

Once the files are unzipped, there will be a momentary pause after which the Panorama Installer opens on your screen.

Use the default settings for the best results. This will install the InView & StockView Demo folder and a Panorama folder within your Program Files folder. (Panorama is the underlying database engine that runs InView & StockView and is an included part of the licensed package)

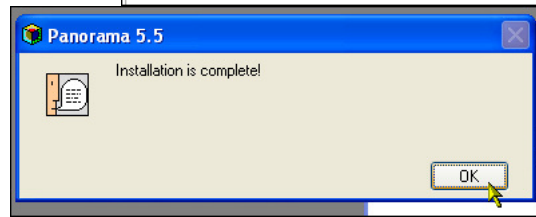

Click on Install to move through this portion of the installation process.

Once the Panorama installation has run, it will state that the Installation is complete.

At this point there will be a pause of 15 seconds to a minute, depending on your computer, before a window pops up to tell you the Installation is Complete.

Click OK and the installer Quits

INSTALLATION PROBLEMS

On occasion there may be errors in the installation process. Our experience has been that these are usually resolved with a simple change to the installation process.

Download the demo, but instead of Run, choose Save at the beginning and Save the download to your Desktop.

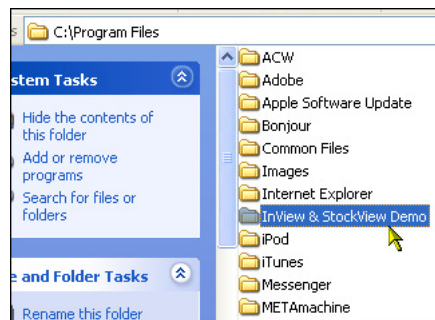

Restart your computer and in all cases, be sure that you're logged in as Administrator. Do not launch Internet Explorer or Firefox.

Double-click on the hs5demo.exe to launch it and follow steps above.

When finished, delete the hs5demo.exe from your desktop.

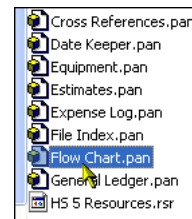

FIRST USE

Locate the newly installed InView & StockView Demo folder. If you installed it as suggested, it's inside your Program Files folder.

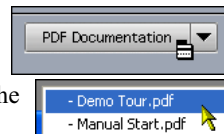

Locate the file named Flow Chart and double click to launch it. Flow Chart is a good starting point for working with the software on a daily basis.

Consider adding a shortcut to Flow Chart to your Task Bar. To do that, right-click on Flow Chart and drag it to the Task Bar. Then choose Create Shortcut from the options that pop up.

When Flow Chart is launched and open, it presents a layout of buttons linking to the various parts of the overall program. A good place to start is in the PDF Documentation. Choose Demo Tour for an introduction to the program.

DEMO CAPABILITIES

The InView & StockView Demo is nearly a fully functional copy of the actual software. There is no time limit and you can add data, save changes and print reports.

Data entered into the demo does not readily carry over into a registered copy later.

Some image processing features are hobbled. Until it's fully registered, images have a dot pattern over them and some metadata and conversion features are non-functioning.

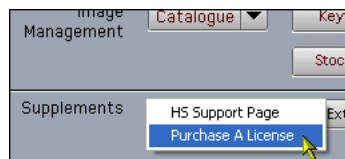

On the demo or an actual copy of InView & StockView, it is necessary to have the free Apple QuickTime software installed. See <http://www.apple.com/quicktime/download/>

FINAL NOTES

PDF Documentation, including a Quick Guide, is accessible via Flow Chart. In Flow Chart, click on the popup menu for PDF Documentation to select from the chapters of the manual.

To purchase a License, click on the HS Web Site popup menu in Flow Chart and choose Purchase A License, or use your browser to go to <http://hsltd.us/products/purchase.html>.

To Delete the Demo, right-click on the InView & StockView Demo folder and choose Delete. Right-click on the Panorama folder and choose Delete.
